Software Engineering

Lecture 12.2: Ethics in Software Engineering

Learning Objectives for this Lesson

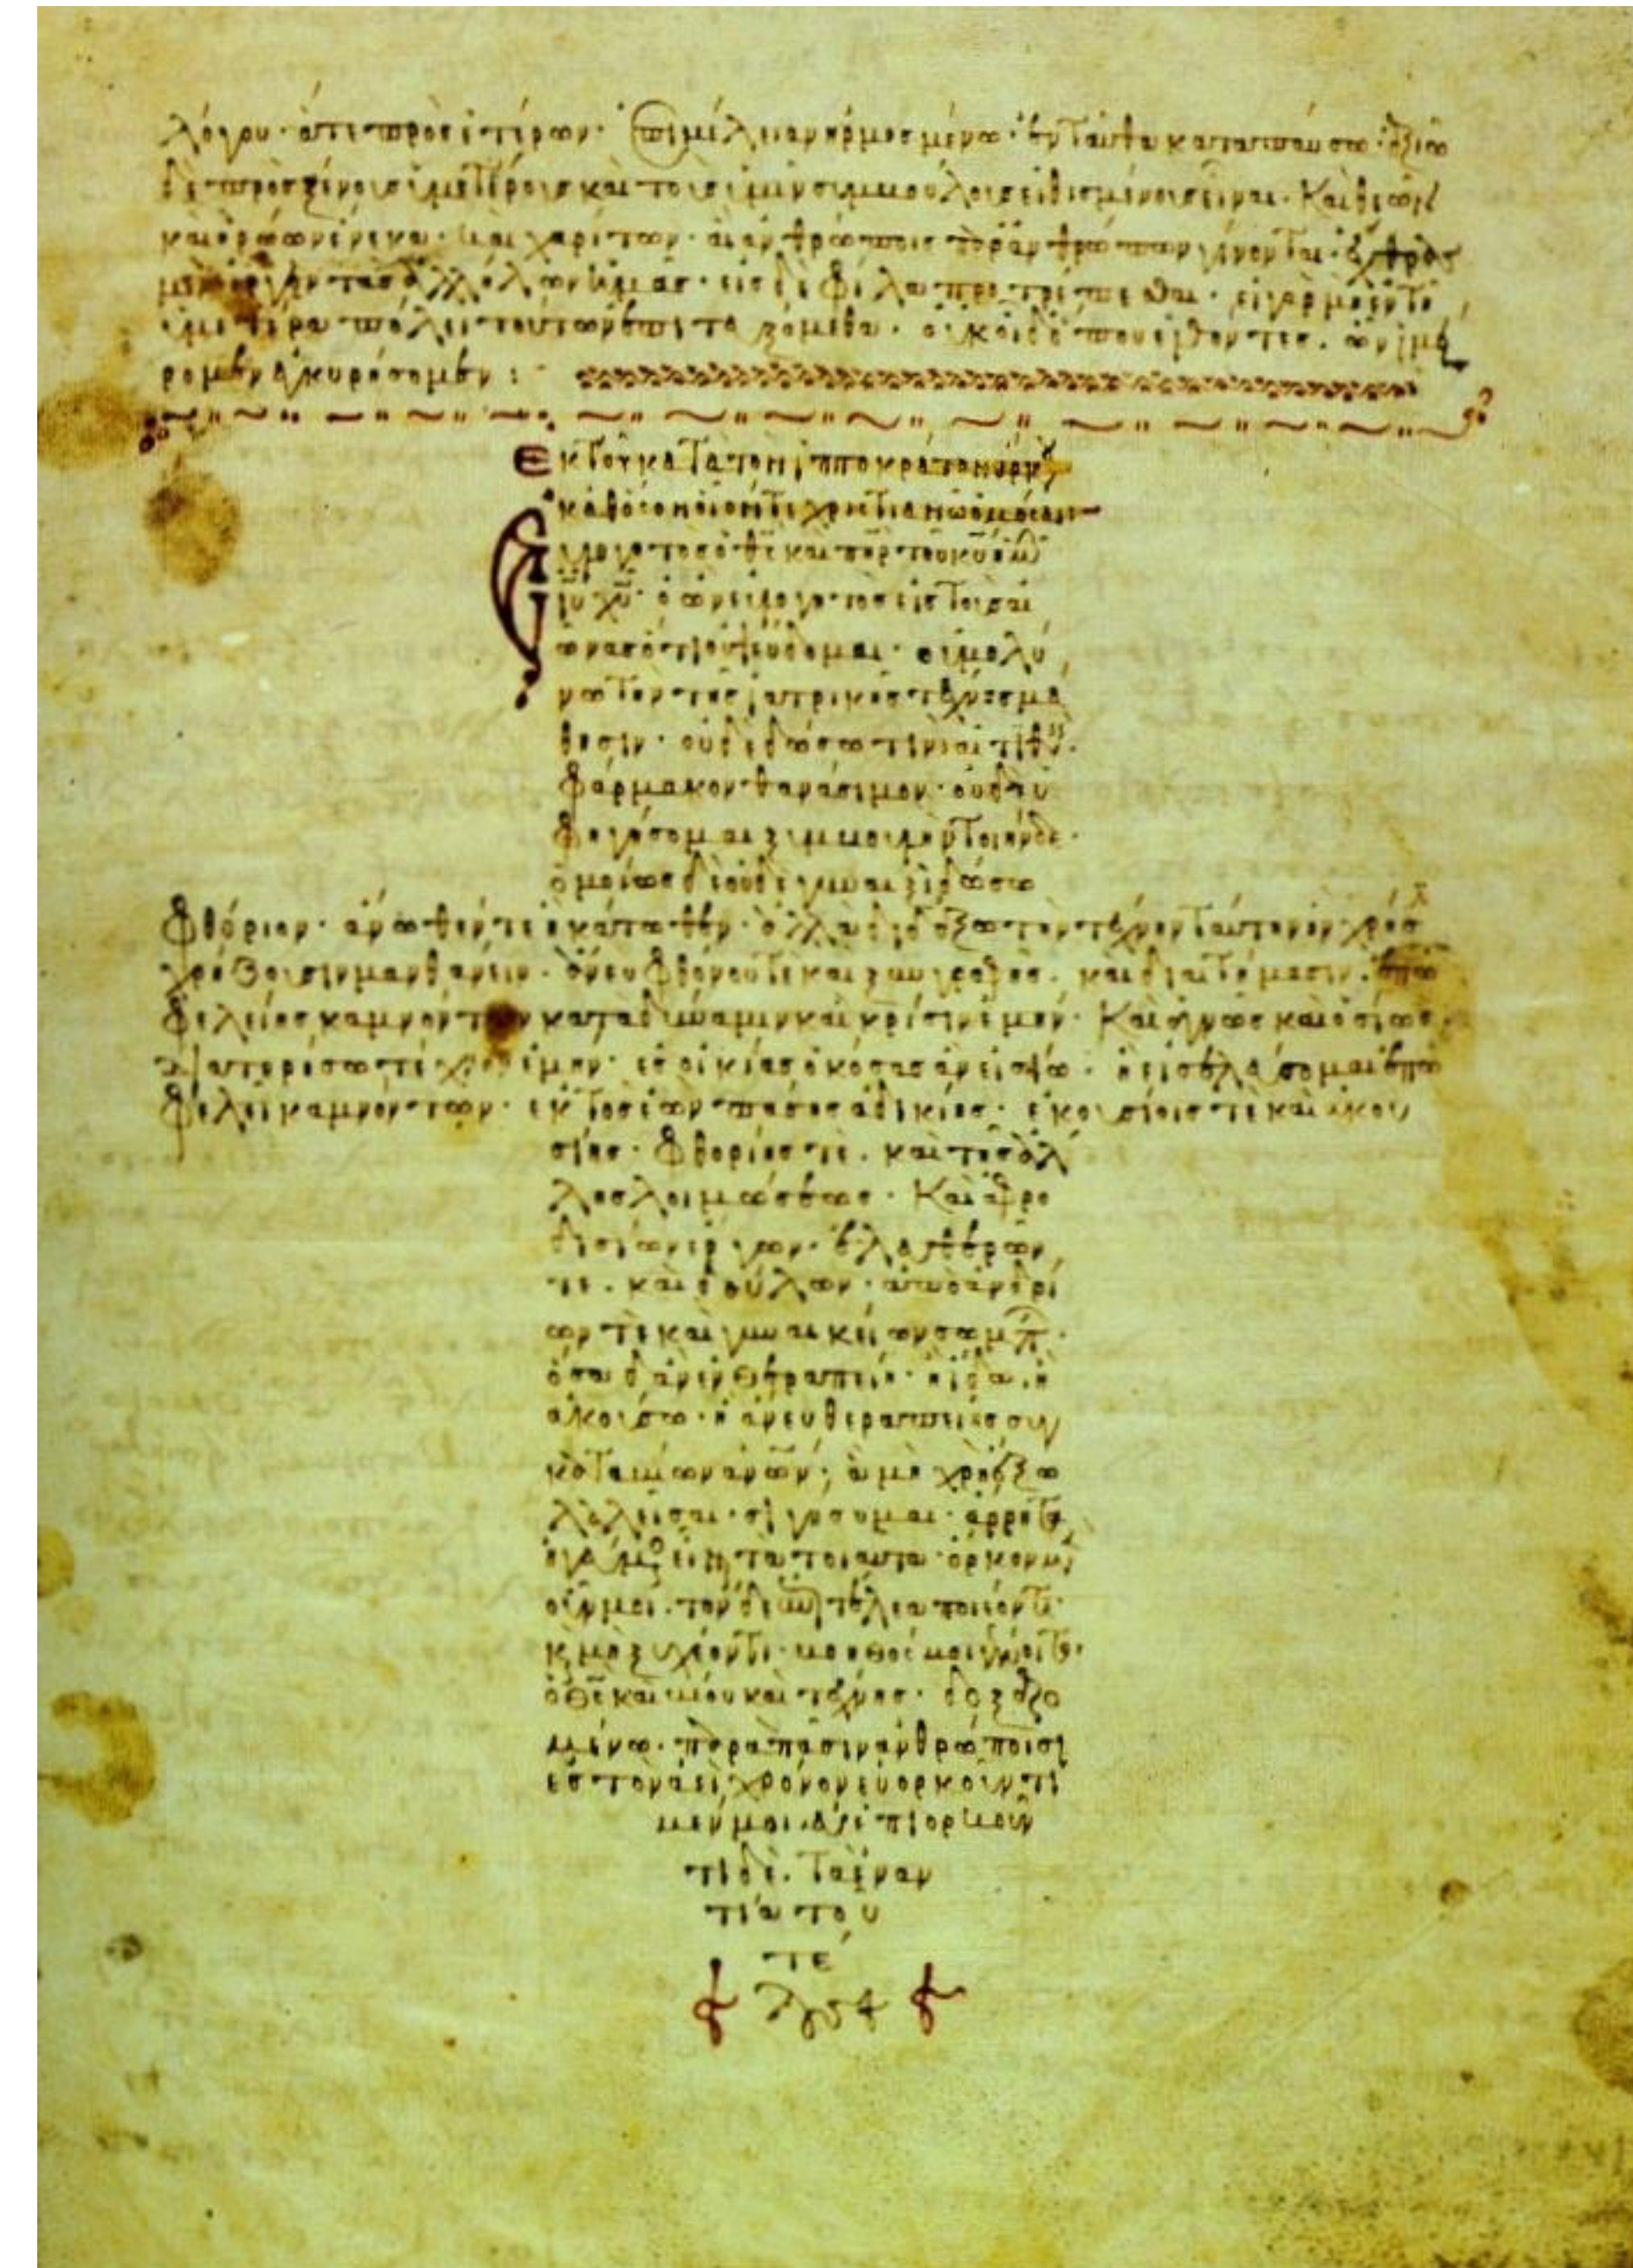

By the end of this lesson, you should be able to...

- Explain several of the meanings of “the public interest”.
- List some sources of ethical guidance for a software engineer.
- List several things that a software engineer can do to try to behave in an ethical manner.

Professional Ethics

Professional standards

- By 1675, standards established for: divinity, law, medicine
- Professionals exercise specialist knowledge or skill - professional ethics governs how this knowledge should be governed

12th-century Byzantine manuscript of the Hippocratic Oath

Code of Ethics

Professional Engineers

Engineers, in the fulfillment of their professional duties, shall:

1. Hold paramount the safety, health, and welfare of the public.
2. Perform services only in areas of their competence.
3. Issue public statements only in an objective and truthful manner.
4. Act for each employer or client as faithful agents or trustees.
5. Avoid deceptive acts.
6. Conduct themselves honorably, responsibly, ethically, and lawfully so as to enhance the honor, reputation, and usefulness of the profession.

Code of Ethics

Professional Engineers: Citigroup Center

- Design met building code, but did *not* account for all failure modes
- Last-minute changes to construction increased odds of failure
- Fixed before disaster could strike, but kept a secret for 20 years

Badly-engineered software can kill people

Therac-25 (1985-1987)

- Bug in software caused 100x greater exposure to radiation than intended
- At least 6 died
- Likely far more suffered: deaths occurred over a period of 2 years!
- Weak accountability in manufacturer's organization

Code of Ethics

ACM's Code of Ethics Software Engineers

1. PUBLIC – Software engineers shall act consistently with the public interest.
2. CLIENT AND EMPLOYER – Software engineers shall act in a manner that is in the best interests of their client and employer.
3. 1. PUBLIC – Software engineers shall act consistently with the public interest.
4. JUDGMENT – Software engineers shall maintain integrity and independence in their professional judgment.
5. MANAGEMENT – Software engineering managers and leaders shall subscribe to and promote an ethical approach to the management of software development and maintenance.
6. PROFESSION – Software engineers shall advance the integrity and reputation of the profession consistent with the public interest.
7. COLLEAGUES – Software engineers shall be fair to and supportive of their colleagues.
8. SELF – Software engineers shall participate in lifelong learning regarding the practice of their profession and shall promote an ethical approach to the practice of the profession.

Unpacking “Public Interest”

1. PUBLIC – Software engineers shall act consistently with the public interest.

Do no harm: how can our software cause harm?

- How can my software fail? What are the implications of that failure?
- Who will use my software, and how might different users use it differently?
- How will my software impact those who do not use it directly?
- Will my software amplify negative behavior for users and society at large?

Unpacking “Public Interest”

How can our software make a positive contribution?

- Can my software make people's jobs easier?
- Can my software make people happier?
- Can my software amplify positive behavior for users and society at large?
- How can my software better achieve these goals?

Unpacking “Public Interest”

What values might our software promote or diminish?

- Human rights - Inalienable, fundamental rights to which all people are entitled
- Accessibility - Making all people successful users of the technology
- Justice - Procedural justice (process is fair) + distributive justice (outcomes are fair)
- Privacy - An individual's agency in determining what information about them is shared
- Human welfare - Physical, material and psychological well-being

Code

ACM's

1. PUBLIC –

2. CLIENT Δ

€

3. 1. PUBLI

§

4. JUDGMENT

5. MANAGEMENT

6. PROFESSION – Software engineers shall advance the integrity and reputation of the profession consistent with the public interest.

7. COLLEAGUES – Software engineers shall be fair to and supportive of their colleagues.

8. SELF – Software engineers shall participate in lifelong learning regarding the practice of their profession and shall promote an ethical approach to the practice of the profession.

Does ACM's Code of Ethics Change Ethical Decision Making in Software Development?

Andrew McNamara

ABSTRACT

Ethical decisions in software development can substantially impact end-users, organizations, and our environment, as is evidenced by recent ethics scandals in the news. Organizations, like the ACM, publish codes of ethics to guide software-related ethical decisions. In fact, the ACM has recently demonstrated renewed interest in its code of ethics and made updates for the first time since 1992. To better understand how the ACM code of ethics changes software-

The first example is the Uber versus Waymo dispute [26], in which a software engineer at Waymo took self-driving car code to his home. Shortly thereafter, the engineer left Waymo to work for a competing company with a self-driving car business, Uber. When Waymo realized that their own code had been taken by their former employee, Waymo sued Uber. Even though the code was not apparently used for Uber's competitive advantage, the two companies settled the lawsuit for \$245 million dollars.

Standards can give more concrete guidance.

- International bodies define standard processes that are designed to protect the public
- By (correctly) following such a standard, you can reduce the chance of harm to users, as well as your ethical (and legal) liability

Aircraft Certification Software and Airborne Electronic Hardware

The Aircraft Certification Service is concerned with the approval of software and airborne electronic hardware for airborne systems (e.g., autopilots, flight controls, engine controls), as well as that used to produce, test, or manufacture equipment to be installed on airborne products. The FAA Aircraft Certification Service develops policy, guidance and training for software and airborne electronic hardware that has an effect on the airborne product (a "product" is an aircraft, an engine, or a propeller).

For a list of people you can contact for additional information regarding Aircraft Certification Software and Airborne Electronic Hardware activities, please visit the [Contacts](#) page.

Email List Update

We are updating the email list used for notification of activities relating to airborne digital systems developed using software and airborne electronic hardware. To be added to the list, send an email to stephen.flynn@faa.gov.

Top Tasks

- [Look up an N-Number 🔍](#)
- [Review preliminary accident data](#)
- [Find aircraft safety alerts](#)
- [Search for SAIBs](#)

FAA CONTINUED OPERATIONAL SAFETY

Continued operational safety ensures the integrity of a product throughout its service life, and includes mandatory requirements for modification, maintenance, inspection and corrective actions.

Standards can give more concrete guidance.

Example: Domino's + ADA

Domino's Would Rather Go to the Supreme Court Than Make Its Website Accessible to the Blind

Rather than developing technology to support users with disabilities, the pizza chain is taking its fight to the top

A screenshot of a web browser showing the W3C Recommendation page for WCAG 2.0. The page has a blue sidebar on the left with the text "W3C Recommendation". The main content area is titled "Table of Contents" and lists various sections and guidelines. The browser's address bar shows "w3.org".

Table of Contents	
Introduction	
WCAG 2.0 Layers of Guidance	
WCAG 2.0 Supporting Documents	
Important Terms in WCAG 2.0	
WCAG 2.0 Guidelines	
1 Perceivable	
1.1	Provide text alternatives for any non-text content so that it can be changed into other forms people need, such as large print, braille, speech, symbols or simpler language.
1.2	Provide alternatives for time-based media.
1.3	Create content that can be presented in different ways (for example simpler layout) without losing information or structure.
1.4	Make it easier for users to see and hear content including separating foreground from background.
2 Operable	
2.1	Make all functionality available from a keyboard.
2.2	Provide users enough time to read and use content.
2.3	Do not design content in a way that is known to cause seizures.
2.4	Provide ways to help users navigate, find content, and determine where they are.
3 Understandable	
3.1	Make text content readable and understandable.
3.2	Make Web pages appear and operate in predictable ways.
3.3	Help users avoid and correct mistakes.
4 Robust	
4.1	Maximize compatibility with current and future user agents, including assistive technologies.
Conformance	
Conformance Requirements	
Conformance Claims (Optional)	
Statement of Partial Conformance - Third Party Content	
Statement of Partial Conformance - Language	
Appendices	
Appendix A: Glossary (Normative)	
Appendix B: Acknowledgments	
Appendix C: References	

[WCAG 2.0 Specification](#)

But many ethical decisions are still hard

Example: Social Media Platforms

- Social media platforms like Facebook, Twitter, or Tiktok can
 - Build communities across distance
 - Spread information for social action
 - Spread misinformation and disinformation
 - Amplify hate speech
- How to balance freedom vs regulation?

Where does this leave us?

So that we can sleep at night

- Consider the different ways that our software may impact others
- Consider the ways in which our software interacts with the political, social, and economic systems in which we and our users live
- Follow best practices, and actively push to improve them
- Encourage diversity in our development teams
- Engage in honest conversations with our co-workers and supervisors to explore possible ethical issues and their implications.

Learning Objectives for this Lesson

You should now be able to:

- Explain several of the meanings of “the public interest”.
- List some sources of ethical guidance for a software engineer.
- List several things that a software engineer can do to try to behave in an ethical manner.
